BLENDS DRY FLAKE APPLIED WALL COATING

TECH DATA...DRY COLOR FLAKES

Composition: Dry color flakes composed of polyvinyl acetate and acrylic copolymer as binder, filler and additives for use in a decorative coating system for walls.

Color: Blended flakes in specified size (1mm or 3mm) and in colors as selected. Flakes to be consistent coloration within the blend and on both sides of each flake.

Coverage: Approximately 20 sq. ft. /pound color flakes when broadcast using specified tools into wet basecoat applied at 10 mils. Spread rate may vary due to substrate and application technique.

Fire Rating: Class "A" Test ASTM E-84 when tested as a system of basecoat, flakes and topcoat.

Contains no lead, mercury, or chromium.

Flash point: Non-flammable (aqueous system).

Dry time of basecoat/flake matrix: (varies with temp. humidity and film thickness) To touch: 20 minutes. To apply topcoat: 4 hours

Odor: Virtually odorless.

Water vapor permeability: does not act as a vapor barrier.
